

Project Development Phase

Model Performance Test

Date	19 Jul 2026
Team ID	
Project Name	AI-powered Job Recruitment & Candidate Management System
Maximum Marks	10 Marks

Metrics like:

- MAE (Mean Absolute Error)
- MSE (Mean Squared Error)
- RMSE
- R² Score
- Confusion Matrix
- Classification Report
- Hyperparameter Tuning

are only used when you create and train your own ML models (e.g., with Scikit-learn, TensorFlow, PyTorch, XGBoost, etc.).

Table:

S.No.	Parameter	Values	Screenshot
1	Metrics	Not Applicable – The project uses Salesforce Agentforce AI, a pre-trained Generative AI service. No custom regression or classification model was trained.	Screenshot of Agentforce AI or Prompt Builder
2	Tune the Model	Not Applicable – Hyperparameter tuning and validation methods are not required because the AI model is managed and optimized by Salesforce.	Screenshot of Agentforce Configuration

Explanation

The **AI-Powered Job Recruitment & Candidate Management System** leverages **Salesforce Agentforce AI** to generate candidate summaries, hiring recommendations, and recruitment insights. Since the AI model is pre-trained and hosted by Salesforce, traditional machine learning evaluation metrics and model tuning techniques are not applicable. System performance is evaluated through functional testing, response time, and AI output quality rather than training metrics.

Parameter	Values
Regression Model	MAE – N/A, MSE – N/A, RMSE – N/A, R ² Score – N/A
Classification Model	Confusion Matrix – N/A, Accuracy Score – N/A, Classification Report – N/A
Hyperparameter Tuning	Not Applicable
Validation Method	Salesforce Pre-trained Agentforce AI (No custom training required)
