

Project Design Phase-II

Technology Stack (Architecture & Stack)

Date	19 Jul 2026
Team ID	
Project Name	AI-powered Job Recruitment & Candidate Management System
Maximum Marks	4 Marks

Technical Architecture

System Flow

Table-1 : Components & Technologies

S.No	Component	Description	Technology
1	User Interface	Recruiters, Hiring Managers, and Candidates interact through a web application	Salesforce Lightning Experience, HTML, CSS, JavaScript
2	Application Logic-1	Candidate registration, job posting, interview scheduling	Salesforce Flows, Apex (optional), Validation Rules
3	Application Logic-2	Recruitment workflow automation	Record Triggered Flows, Screen Flows
4	Application Logic-3	AI-powered recruitment assistance	Salesforce Agentforce, Prompt Builder

5	Database	Stores candidate, recruiter, interview, and job details	Salesforce CRM Objects
6	Cloud Database	Cloud-based data storage	Salesforce Cloud Platform
7	File Storage	Resume and document storage	Salesforce Files
8	External API-1	Email notifications	Salesforce Email Services
9	External API-2	Authentication & Identity Management	Salesforce Identity
10	Machine Learning Model	Candidate evaluation and hiring recommendations	Salesforce Einstein AI / Agentforce AI
11	Infrastructure (Server/Cloud)	Cloud deployment	Salesforce Cloud Infrastructure

Table-2 : Application Characteristics

S.No	Characteristics	Description	Technology
1	Open-Source Frameworks	Front-end technologies and standard web technologies	HTML5, CSS3, JavaScript
2	Security Implementations	Role-based access, profile permissions, authentication, encryption	Salesforce Security Model, Role Hierarchy, Profiles, Permission Sets, MFA
3	Scalable Architecture	Multi-tier cloud architecture supporting thousands of users	Salesforce Multi-Tenant Cloud Architecture
4	Availability	High availability with cloud infrastructure and automatic backup	Salesforce Cloud Platform
5	Performance	Optimized workflows, indexed database, reports, dashboards, and AI processing	Salesforce Platform Optimization, Flow Automation, Lightning Framework

Technology Stack Summary

Layer	Technology
Frontend	Salesforce Lightning Experience, HTML5, CSS3, JavaScript
Backend	Salesforce CRM, Apex, Flow Builder
AI Layer	Salesforce Agentforce, Prompt Builder, Einstein AI
Database	Salesforce CRM Database
Automation	Record Triggered Flows, Screen Flows, Approval Processes
Security	Profiles, Roles, Permission Sets, MFA, Encryption
Storage	Salesforce Files
Reporting	Salesforce Reports & Dashboards
Cloud Platform	Salesforce Cloud

Architecture Explanation

The **AI-Powered Job Recruitment & Candidate Management System** is built on the Salesforce Cloud Platform using a multi-tier architecture. Recruiters, hiring managers, and candidates access the application through Salesforce Lightning Experience. The application logic is implemented using Salesforce Flows, Validation Rules, Approval Processes, and Apex (where required). AI capabilities such as candidate evaluation, hiring risk analysis, and recruitment recommendations are provided through Agentforce and Prompt Builder. Candidate records, job openings, interview schedules, and recruitment workflows are securely stored in Salesforce CRM Objects. The platform provides role-based security, cloud scalability, automated workflows, email notifications, reports, and dashboards to streamline the recruitment process.
